

PUBLIC HEALTH MINOR

The Minor in Public Health provides students with a cursory view of important health issues and the public health system. The information learned in this minor applies to us as individuals as well as the communities we live and work in. The minor would be a great complement for students in many majors including communications, child development, nutrition, nursing, psychology, sociology, social work, recreation, hospitality, and parks management, and others.

Course Requirements for the Minor

The following courses, or their approved transfer equivalents, are required of all candidates for this minor.
